BURAK YILDIZ

COMPUTER ENGINEER

CONTACT +90 544 638 05 42 burakkyildiz@icloud.com Mersin, Türkiye

ABOUT

- I am a Computer Engineer with experience in mobile application development, web technologies, and game development. After strengthening my software engineering fundamentals through these projects, I shifted my focus toward **Data Science, Machine Learning, Deep Learning, and Artificial Intelligence**.
- I am currently improving my skills in Python, data science, machine learning model development, and building FastAPI-based ML services. I actively work on developing end-to-end machine learning solutions, from data preprocessing to model deployment.
- My goal is to combine my software engineering background with data-driven techniques and advance my expertise in machine learning, deep learning, and artificial intelligence to ultimately specialize as an **ML / AI Engineer**.
- To support my learning process, I regularly build machine learning projects and publish them on **GitHub** and **Kaggle**, strengthening my practical experience.
- Recently, I've been building LLM-powered RAG systems (LangChain + vector search) and serving them via FastAPI for production-style ML/AI applications.

PROFESSIONAL EXPERIENCES

iOS DEVELOPER (FREELANCE) | JAN 2025 - JUN 2025

NEFARIUS APPS

- I develop innovative applications using architectures such as MVVM, MVC and technologies such as Swift, UIKit, Programmatic UI. I also manage the marketing process of the application I developed.

iOS TRAINEE | NOV 2024 - FEB 2025

iBOOTCAMP

- In this Bootcamp, I learned a lot about Swift and mobile programming. UIKit, MVC-MVVM architectures, Programmatic UI, as well as interview simulations from professional people in the industry, marketing trainings, question-answer sessions on how we should manage our career at home and abroad. In this process, we developed applications in which we used certain architectures and technologies as preparation for the industry.

GAME DEVELOPER | JUL 2022 - JAN 2023

DEVBASE

- My role in this position was to develop the mechanics of the mobile game produced by the company, add new missions, improve the reward system, using C# and Unity technologies. Also, my other role was to do the tests for the game.

FRONTEND DEVELOPER | FEB 2022 - JUL 2022

DEVBASE

- My role in this position was to design the admin panel of the game using Vue.js technology for the mobile game produced by the company.

SKILLS and TOOLS

Turkish - Native
English - Intermediate

Advanced skills in
Python, Scikit-Learn, Pandas, NumPy, Matplotlib, Seaborn, TensorFlow/Keras, SQL, FastAPI, LangChain, RAG, LLMs

ML & Development Tools
Jupyter Notebook, Google Colab, VS Code, PyCharm, Git, GitHub, Docker

Experience with **C, C#, SWIFT, HTML, CSS, JAVASCRIPT**

EDUCATION

Mersin University Faculty of Engineering grad from **Computer Engineering**

HOBBIES

Music and playing instruments
